# Student Information

Enter your name, course, Week 1, and assignment title.

Student name: Bhumika Khadka
Course: Data Communication & Networking
Assignment: Fundamentals of computer networking

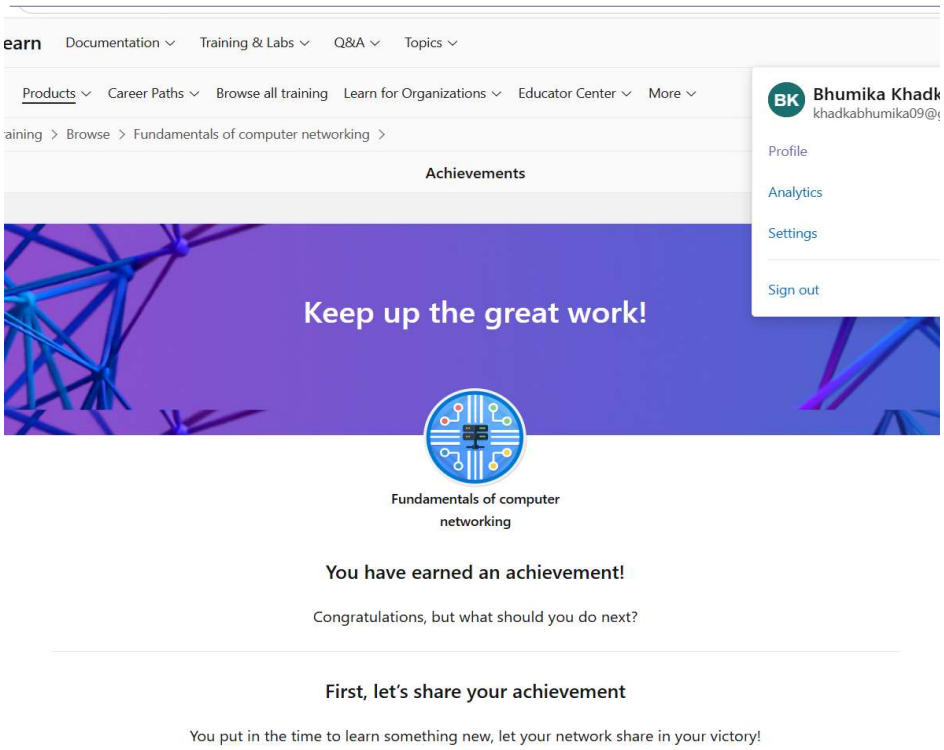

# Microsoft Learn Profile — 4 pts

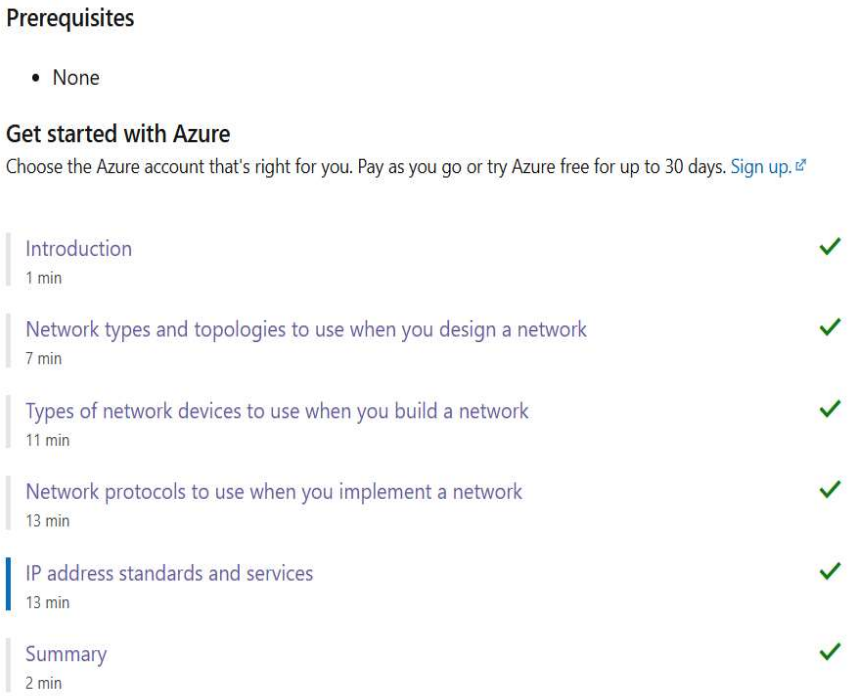

Show your signed-in Microsoft Learn profile and visible display name.

## Module Completion & Knowledge Check — 12 pts

Complete all six units and the knowledge check. Insert a screenshot showing the module title, your completion status, and knowledge-check status (if visible). If one screenshot cannot show both, insert two screenshots on this slide.

Reflection & Submission Quality — 4 pts

Write 3–5 sentences in your own words: identify one networking concept you learned and explain how it applies to a real-world network. Keep all screenshots and text clear and readable.

Concept learned: Domain Name System

Real-world application: A real world use of DNS is allowing people to type website names like Google.com instead of remembering and entering numerical IP addresses.

DNS translates website names into IP addresses that computers can understand and use to communicate. In a real world network, DNS allows users to access websites by typing easy to remember names instead of numerical IP addresses. For example, when I type www.google.com into a browser, DNS helps my device find the correct server and load the website.
